

Microcross STS Announces New Business Development Director

FOR IMMEDIATE RELEASE

MILPITAS California, January 21, 2019 – Microcross is pleased to announce a new appointment within the company’s senior sales team. James A. Will II (Jim) has joined Microcross Silicon Turnkey Solutions (STS) as Director of Business Development. Jim will operate out of his home office in Kansas City, MO and work to champion both Microcross STS services and the full range of Microcross solutions.

Jim brings more than twenty years’ experience in semiconductor fabrication and technical leadership as well as extensive expertise in Government Contracting supporting customers across Defense, Aerospace, Semiconductor and Commercial sectors.

In his most recent role as Principal Engineer, Global Security, Jim acted as the Technical Lead for the DOE NNSA with Honeywell Federal Manufacturing & Technologies in Kansas City, MO in roles with progressively increasing responsibilities spanning eleven years including semiconductor products Realization Site Leader and Technical Management. Previously, Jim held roles in Process, Device, Product Engineering and Engineering Management with Motorola in Austin, TX and Infineon Technologies in Richmond, VA.

Jim earned his BSEE with semiconductor emphasis and holds a MS in Materials Science, both from Rochester Institute of Technology.

“We are delighted to have Jim join our team,” stated Jeremy Adams, Interim General Manager of Microcross STS. Jim brings an unparalleled combination of technical knowledge with a deep understanding of the challenges faced by the domestic Defense industry in sourcing and qualifying critical microelectronic components. We are confident that Jim can leverage this experience to help Microcross more effectively support these customers in fulfilling their mission-critical assignments.”

About Microcross Silicon Turnkey Solutions (STS)

Microcross STS offers a complete range of design, manufacturing, assembly, advanced test & qualification solutions as well as military-level testing of ICs for major Hi-Rel customers. Microcross STS ensures a highly-secure, fully-compliant product development process from program conception through design and prototyping, product delivery and inventory management. With its rich engineering legacy, we’ve been meeting the stringent requirements of aerospace/defense, space and commercial product applications for more than four decades.
